Subject: Spyware Workshop - Comment, P044509

I love "SpyWare" it accounts for almost 90% of my computer consulting/technical support sales.

Your job should be to put these bastards out of business. It's not that I don't like the money. However my job is to protect my customers and to properly do that I must support any legislation that will curb software that purports to be of value to the consumer, yet causes them to spend hundreds of dollars in professional services that otherwise would not be required. I have had customers that these software "vendors" have literally shut them down by causing the computer not to function properly.

Regards,

Paul Coker
