Subject: Spyware Workshop - Comment, P044509

I personally feel that spyware and adware are invasive and a violation of my personal rights. If I want to go to a certain site to view or use, I feel that I should be able to without every one elses ads popping up that I am not interested in. As far as spyware is concerned, I feel that what I do on my personal computer is my business and no one elses.

I feel that the FTC is not doing enough to stop spyware or adware. It should be a violation for cmpanies to install ar use spyware to track what I do on my personal computer. What I do on my personal computer is my business and no one elses. Adware should be prohibited as well, if I personally go to a site I am accepting that sites ads, but that is my choice while I am at that site. I should not be subjected to other adware, especially porn enless I choose to enter those sites personally.
