Subject: Spyware Workshop - Comment, P044509

My name is Richard Alexander,  
I have a comment or an Ideal.

I hope someone will come out with a software that will scan installations from the internet or from a disc and can prompt you when it finds spyware and says something to this affect: "THIS INSTALL CONTAINS SPYWARE.....DO YOU WANT TO CONTINUE WITH THE INSTALLATION?" Click YES to Continue or NO to Cancel this installation.

Then you will get a prompt you to report the finding to the software manufacturing Company.

I think anything that's installable from the internet or a disc should have a lable warning telling consumers that this software or program may contain items what may be considered Spyware.

So a Spyware warning lable, just like the lable on a pact of cigarettes.

I think Web sites that offer downloads or software downloads should disclose spyware warnings.

I think there should be a law aganist spyware just as well a law aganist Email-Spam.

And why don't the Antivirus software companies include Spyware scan detectors and removals, To me Spyware, Email-Spam and Viruses are one in the same.

Thank You,  
Richard Alexander
